

FOR ANIMAL USE ONLY

Natural tocopherols in feedstuffs can be destroyed through processing, ensiling and storage. A reduced vitamin E intake can result in marginal deficiencies that may not be visible. Intramuscular or subcutaneous injections offer an efficient and rapid method to increase vitamin E status of animals.

Indications:

Natural E 300 Injectable tocopherol (natural-source vitamin E) is a clear, sterile water emulsifiable solution of d-alpha-tocopherol for use as an aid in the prevention and treatment of vitamin E deficiencies in swine, cattle and sheep. This product is intended as a supplemental source of natural vitamin E.

Each mL contains:

300 IU's of vitamin E (as d-alpha-tocopherol, a natural source of vitamin E) compounded with 2% benzyl alcohol (preservative) in a water emulsifiable base.

Caution:

Do not exceed recommended dosage. Occasionally, reactions of an anaphylactic or allergic nature may occur. Should such reactions occur, treat immediately with injection of epinephrine or antihistamines.

Warning:

Do not add water to solution.

Store between 15°-30°C (59°-86°F) in a dark place.
